

Method 2 local step

7-mark operational completion

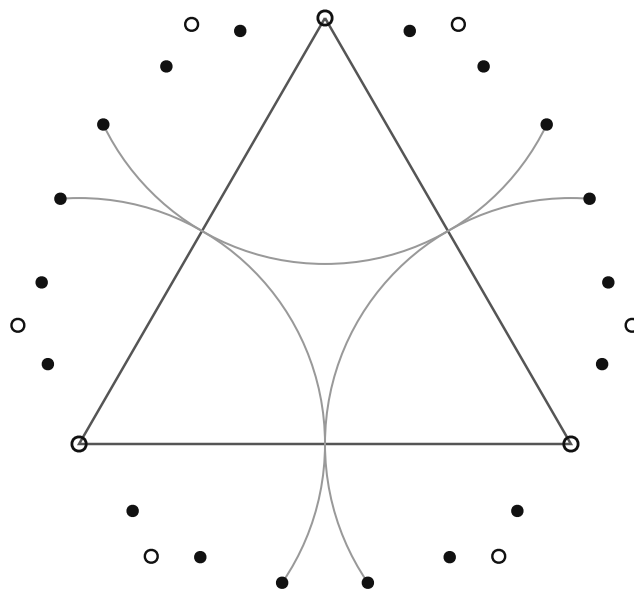

$$\alpha_2 = \arccos(5/8)$$

$$k = -3, \dots, +3$$

Original triangle

3 carriers x 7 = 21 semantic marks

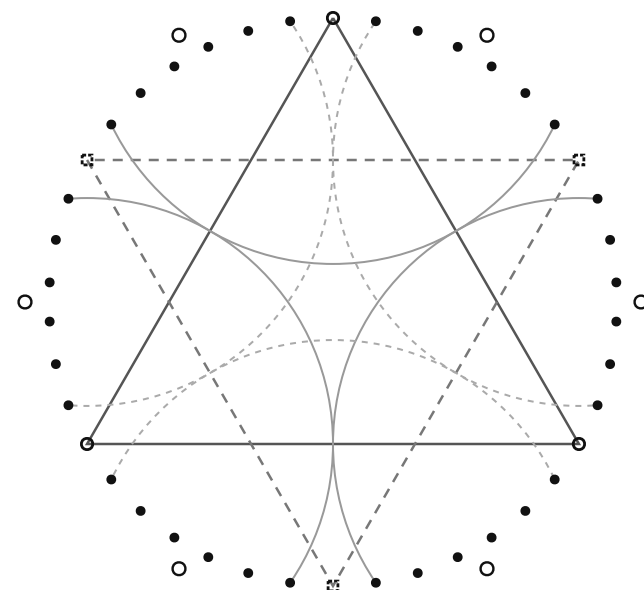

$$15 \text{ L} : 6 \text{ S} \mid \text{RMS} = \sqrt{10} \text{ delta}$$

open outer markers identify the 6 S gaps

Original + reciprocal

6 carriers x 7 = 42 semantic marks

$$36 \text{ L} : 6 \text{ S} \mid \text{RMS} = \sqrt{6} \text{ delta}$$

solid triangle = original; dashed = reciprocal

Visualization only — geometry and symbolic classes are read from frozen Phase 8E/8F artifacts.
